**FCC Form 690 - Construction Status**

Smith Bagley, Inc. did not conduct any drive tests with respect to the SAC associated with this filing during the reportable period (November 20, 2014-December 31, 2014).

**Smith Bagley, Inc.**  
**Project Status Description**

Pursuant to Section 54.1009(a)(6) of the Commission's rules,<sup>1</sup> Smith Bagley, Inc. ("SBI") submits the updates set forth below to its project description associated with this Study Area Code ("SAC") that was initially provided by SBI in its FCC Form 680 filed in conjunction with its Auction 901 winning bids.

In its FCC Form 680, SBI explained that in order to provide the most advanced wireless broadband service available to date, SBI is using the proceeds from auction 901 to expand its footprint with new cell sites. Specifically, use of support from Auction 902 will permit SBI to improve coverage to expand its 3G footprint and to cover operating and maintenance expenses expected in remote tribal areas that are not expected to be cash flow positive for many years, if ever. In many areas where Applicant currently serves, consumers have access to data speeds that are insufficient to stream high quality video and transmit large files without significant delay. Installation of 3G service will significantly increase data speeds. This will serve the public interest by allowing consumers to make more efficient use of smart phone devices, providing access to a wide variety of software applications. In every area where coverage is improved, rural citizens will see significant public safety benefits, as access to 911, E-911 and other important communications are all facilitated by improved connectivity in a mobile environment.

To date SBI had completed its network design, and has commenced construction of its network. However, for this census tract, SBI must construct new towers to expand its 3G services into the eligible areas within this census tract. SBI is still in the process of securing land

---

<sup>1</sup> Section 54.1009(a)(6) provides that a winning bidder shall include "Updates to the information provided in § 54.1005(b)(2)(v)."

to allow them to construct the necessary towers. As the Commission is well aware, securing sites on tribal lands present significant additional challenges that have the potential to negatively impact the schedule of construction. Any activity relating to antenna structures on tribal lands could result in delay, due to approvals and coordination with tribal councils. In some instances, it can take two years or more to obtain all necessary approvals for sites on tribal lands.

Nonetheless, SBI anticipates that it will complete construction and deploy the network in the areas associated with this study code by no later than November 20, 2016. At this time, there are no further updates with respect to network design, construction, deployment and maintenance associated with this SAC, as set forth in SBI's FCC Form 680.

**FCC Form 690 - Construction Status**

Smith Bagley, Inc. did not conduct any drive tests with respect to the SAC associated with this filing during the reportable period (November 20, 2014-December 31, 2014).

**Smith Bagley, Inc.**

**Project Status Description**

Pursuant to Section 54.1009(a)(6) of the Commission's rules,<sup>1</sup> Smith Bagley, Inc. ("Filer") submits that there is no material updates to its project description, included the projected budget, associated with this Study Area Code that was provided by Filer in its FCC Form 680 filed in conjunction with its Auction 901 winning bids.

In its FCC Form 680, Filer explained that in order to provide the most advanced wireless broadband service available to date, Filer is using the proceeds from auction 901 to expand its footprint with new cell sites. Specifically, use of support from Auction 902 will permit SBI to improve coverage to expand its 3G footprint and to cover operating and maintenance expenses expected in remote tribal areas that are not expected to be cash flow positive for many years, if ever. In many areas where Applicant currently serves, consumers have access to data speeds that are insufficient to stream high quality video and transmit large files without significant delay. Installation of 3G service will significantly increase data speeds. This will serve the public interest by allowing consumers to make more efficient use of smart phone devices, providing access to a wide variety of software applications. In every area where coverage is improved, rural citizens will see significant public safety benefits, as access to 911, E-911 and other important communications are all facilitated by improved connectivity in a mobile environment.

As of this date Filer had completed its network design, and has commenced construction of its network. Filer anticipates that it will complete construction and deploy the network in the areas associated with this study code by no later than the construction deadline of November 20, 2016. There are no further updates with respect to network design, construction, deployment and maintenance associated with this SAC, as set forth in Filer's FCC Form 680.
